Subject: Reconciliation of CVP Water Deliveries within Kaweah Delta Water Conservation District Boundaries

Bruce George, General Manager of the Kaweah Delta Water Conservation District, requested a reconciliation of the amount of CVP water deliveries within the Kaweah Delta Water Conservation District (KDWCD) boundaries. There were discrepancies between the KDWCD annual reports, the U.S. Bureau of Reclamation annual reports, and the Bookman and Edmonston 1972 report for KDWCD.

The U.S. Bureau of Reclamation (USBR) began delivery of Central Valley Project (CVP) water through the Friant-Kern Canal (FKC) in the latter part of 1949. In 1985, the USBR turned over operations of the FKC to the Friant Water Users Authority (FWUA), while retaining the water service contracts.

The Tulare Irrigation District (TID) is the only entity within the KDWCD area boundary with a long-term CVP water service contract, however Corcoran Irrigation District, Lakeside Irrigation Water District and KDWCD have each purchased water from the USBR or from long-term contractors under exchange or short-term agreements. There are also instances of inter-agency agreements between other entities involving the delivery of CVP water within the KDWCD boundary. As a historical note, the Lindsay-Strathmore Irrigation District, a long-term CVP water service contractor outside of the KDWCD area, took delivery of CVP water in the Kaweah River during the period 1949 through 1953, while their delivery facilities were being completed.

CVP water can be diverted from the Friant-Kern Canal into the KDWCD area principally from three turnouts – the Tulare Irrigation District turnout, the St. Johns River channel and the Lower Kaweah River channel. Water can and has also been diverted into other waterways such as Cottonwood Creek and potentially benefits the KDWCD service area. There was no attempt to quantify these deliveries, as they are believed to be very small in overall quantity. In addition, CVP water has been released into the Kings River channel for delivery through canal systems in the westerly portion of the KDWCD area.

Page 2 of 4

Attached is a map showing the KDWCD boundaries, the Friant-Kern Canal, the Kaweah, St. Johns and Kings Rivers, and various water districts within or adjacent to the boundaries of the Kaweah Delta Water Conservation District.

I compared the Kaweah Delta Water Conservation District annual reports for the years 1948-1997, KDWCD operations data for the years 1998-2003, the Bookman and Edmonston report for the years 1948-1970, the U.S. Bureau of Reclamation published annual reports for the years 1948-1992, the U.S. Bureau of Reclamation website annual reports for the years 1993-2003, and the Friant Water Users Authority reports for the years 1985-2003, for CVP water deliveries within the boundaries of the Kaweah Delta Water Conservation District.

I found that many of the discrepancies between the various reports, especially during the early years, were caused by each agency using a different reporting year – January through December, March through February, and October through September. In addition, there were many instances where water was delivered over several days and one agency would report it during the month and/or year it started to run and another agency would report it during the following month and/or year when it had been delivered.

I found notations in the KDWCD annual reports that indicated that during the early years there were several major flood events where water deliveries could only be estimated and/or records of actual deliveries were not available. The physical facilities had not been completed and were not accessible due to the flood conditions, and consequently measurements were often based on staff gauges that had to be read at a distance or not read at all. There were also notations that some of the deliveries were "calculated based on requested releases" as opposed to measurements of actual deliveries.

The FWUA, while actually measuring all of the water delivered, only reports water to the USBR for water accounting purposes on their monthly reports. There are often notations on the FWUA monthly reports of "free" or "215" water that are not reflected in the amount of water "reported" to the USBR. I also determined that the USBR annual reports do not include "free" or "uncontrolled" CVP water that nevertheless flows down the Friant-Kern Canal and can be delivered within the KDWCD boundary.

In addition, I found that unusual deliveries, such as to the City of Visalia, to Corcoran ID through Lakeside, exchanges between CVP and non-CVP entities and inter-agency deliveries, did not get included in all of the various reports – perhaps showing up on one, but not necessarily the others.

The USBR (through 1992, the last year published) and Bookman and Edmonston reports gave only annual totals, but the KDWCD and the FWUA reports were available with monthly figures. After breaking the KDWCD reports down by month and comparing the delivery totals using either a calendar year for the USBR and Bookman and

Subject: Reconciliation of CVP Water Deliveries within Kaweah Delta Water Conservation District Boundaries

April 20, 2004

Page 3 of 4

Edmonston reports on a March through February year for FWUA, the differences were greatly reduced.

With all of these variables taken into account, I compared the various reports and then selected the figures I felt most accurately reflect the total amount of CVP water delivered within the Kaweah Delta Water Conservation District boundaries during each water year (October 1 through September 30). The total deliveries shown in this report include "free" and "uncontrolled" water that is not "accounted" for by the USBR in their annual reports. The totals also include inter-agency transfers of CVP water that was delivered within the KDWCD area. Please review the attached table, Adjusted CVP Deliveries within KDWCD, which gives a comparison of the various agency reports along with an Adjusted Total. It is this Adjusted Total that I believe provides the most accurate accounting of CVP water deliveries within the boundaries of KDWCD.

As a general statement, the water community has become more sophisticated in their exchange agreements to transport water and to avoid facility capacity restrictions, both in the canals and in the storage reservoirs. This results in less water being spilled and therefore lost to the system, however it does make for more complicated water tracking and accounting.

To avoid some of these discrepancies in the future, I would suggest that:

1. KDWCD use the FWUA monthly reports, but that special care be taken to note unusual water deliveries, such as "free" or "uncontrolled" water, in addition to the "reported" totals.
2. The USBR annual reports are posted on their website with monthly breakdowns of deliveries for comparison of records, keeping in mind that "free" or "uncontrolled" water is not included. These reports can also be used to indicate CVP water sold to other entities, such as Lakeside Irrigation Water District, that normally do not receive CVP deliveries.
3. KDWCD should make a practice of annually making an inquiry to every water and irrigation district that has a turnout or other facility within the KDWCD's boundaries to determine whether or not any CVP water was moved through that facility and, if so, the nature and amount of water that flowed into the KDWCD area. This would serve as a double check, for example, of Tulare Irrigation District's CVP water deliveries, as reported by FWUA. Additionally, this would bring to light any exchange water delivered at the Lakeside Irrigation Water District's headgate from the Kings River or at other locations within KDWCD's boundaries.

I have also attached as appendices some comparisons of source data and the source data itself.

2002-2003	74,296	89,907	132,082		132,082	includes "uncontrolled Class II" water and inter-agency deliveries
2003-2004						
<b>Totals:</b>						
1948-2003	6,812,856	6,539,658			6,902,899	

**Notes:**

1955-1956 Even though 406,839 af was delivered in the 1955-1956 WY under temporary/short term contracts, no USBR records were provided of actual deliveries.  
 general Although FWUA measures deliveries of all water, the USBR does not include "free" or "uncontrolled" water in their annual reports
